

# OUR PRODUCTS

"I wanted to send you all a before and after picture of the RSM monument. When we first started talking about this, they wanted to eliminate the box fixtures in front of the sign because they didn't like the look of them in the daylight. We developed a fixture that would resemble the decorative stone cap that was existing but gave it an up light in 4000k to light the RSM name and then a 3000K down light to wash the decorative stone wall. You can see the difference of how it went from somewhat of an awkwardly lit sign with a ribbon effect of lighting to something that looks elegant and artistic. 1254 made the stone cap fixtures as well as the wall washers using LED strip lights. The city LOVES the look of the sign!"
